AQUA COOLER®

COLD WATER RESERVOIR

All products have a highly polished, stainless steel tank which holds 1.8 litres of chilled water during normal usage. Each cooler has a chilling capacity of 5 litres per hour during peak periods.

HOT WATER RESERVOIR

The stainless steel hot water tank is fitted with a high performance 575-watt band heater. This model delivers 50 cups (150ml) of hot water per hour at approximately 90°C. Hot tanks have drains fitted for easy cleaning and sanitisation. It is very easy to remove for service if required. Each tank has its components swaged together. As no fusion welding is used, the occurrence of pitting, crevice or galvanic corrosion is prevented.

REFRIGERATION

All products use 40gms of R134a refrigerant which is non-toxic, non-flammable and environmentally friendly. Refrigerant flow is controlled by a capillary tube which has no moving parts.

TEMPERATURE CONTROL

The thermostats are factory pre-set.

COMPRESSOR

1/16 h.p. capacity, 49 watts. The compressor is hermetically sealed for silent running.

CONDENSER

The static condenser is fabricated from steel tube and wire.

ELECTRICAL

240 volts, 50Hz. A 2 metre house cable and 3 pin plug are supplied.

PERFORMANCE TO ARI 1010-94 STANDARD

Inlet water - 26.7°C
Outlet water - 10°C
Ambient Air - 32.2°C

WEIGHT-PACKED

B17 - 16kg
B18 - 15kg

DIMENSIONS - PACKED

Width - 370mm	Container Capacity
